

Secure **data entry**
on demand

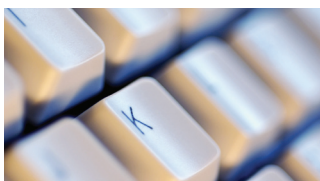

Eliminate Seasonal Hiring and Second Shifts

vcapture is data entry on demand. It is a completely scalable human technology solution that plugs seamlessly into your existing data capture system. Gain instant 24/7 access to a team of more than 10,000 remote data entry specialists, available whenever you need them.

100% Accurate – Guaranteed

vcapture's proprietary human technology solution combines best-in-class data capture software with the power of 10,000 data entry specialists. These specialists work around the clock to key all data, including that which computers can't recognize. This approach does more than increase efficiency. Every character keyed is confirmed by at least two independent sources to ensure 100% accuracy.

Secure by Design

available when you need it

vcapture breaks your data into tens of thousands of unrelated, non-contextual snippets prior to leaving the protection of your firewall. Once the snippets are keyed and confirmed for accuracy, they are returned to the vcapture module and reassembled behind the security of your firewall. At no point do your sensitive documents leave the security of your system.

Powered by

virtusolutions – human technology

vcapture is powered by **virtu**solutions - a secure, highly scalable human technology workforce providing clients with efficient, scalable, and secure data transformation.

virtusolutions' human technology is an award-winning system used by government and industry managers throughout the US and abroad.

10,000 data entry specialists –
